Daniel Maldonado

AI Engineer | Agentic AI, Automations & Python | CompTIA Security+
certified
Medellín, Antioquia, Colombia

Summary

Vi veri veniversum vivvs vici

Experience

Lean Solutions Group
AI Engineer
March 2025 - Present (1 year 5 months)
Medellín

I architect and ship production AI automations for the Transportation & Logistics industry — multi-agent LLM pipelines built on the Anthropic Claude API, n8n orchestration, and Python/Flask backends that turn manual workflows into systems that actually scale. I own the full lifecycle (plan, design, develop, test, deploy) while engineering deterministic verification layers and Langfuse evaluation so AI output is reliable, not just impressive. I also lead cybersecurity for the team, hardening every pipeline so automation never comes at the cost of trust.
